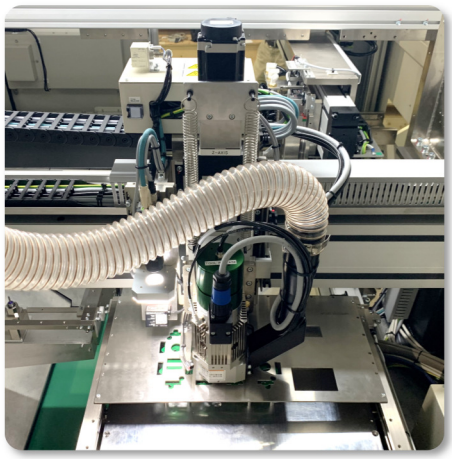
MEDIUM PANEL ROUTER

Local Agent:



The MPR is an in-line router machine specially designed to route (depanelize) medium-size panels with PCB size up to 450mm x 400mm into individual units. It is a fast, space-saving, and accurate machine designed for high volume production with minimal operator participation. It has two worktables. While one of the worktables is in high-speed routing operation, the other worktable works with the robotic P&P module to unload boards and load the new PCB panel. This gives us 100% operational uptime without the issue of load/unload time.

Using a high-resolution CCD camera and MPR user-friendly Windows-based software allows users to program the routing paths in minutes. There are also no limitations in the number of programs stored. MPR uses high-quality components and a welded steel structure to ensure rigidity and high performance. All the axes and linear guides used are protected from dust and dirt to increase lifespan and performance.
